

# CARDIAC ARREST

If the patient cannot be awakened and s/he does not breathe, **DIAL THE EMERGENCY NUMBER 112**. Start cardiopulmonary resuscitation and ask others to bring you the defibrillator.

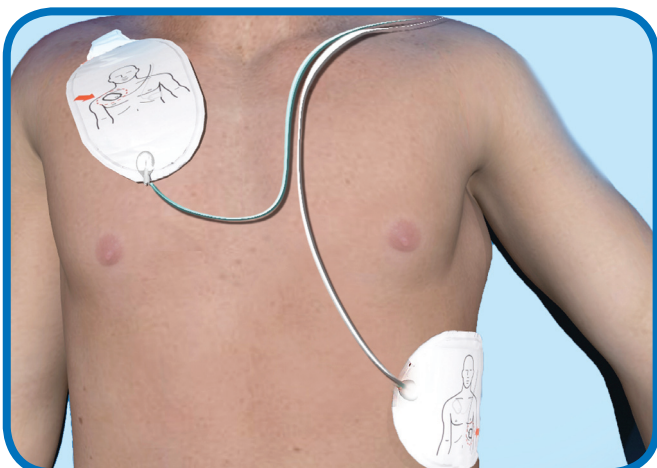

**1.** Switch on the FR2-defibrillator.

**2.** Take the pads out of pouch.

**3.** Place the pads on the patient's clean and dry chest as directed.

**4.** The patient **MUST NOT BE TOUCHED** during the heart rhythm analysis.

**5.** Press the blinking orange shock button, if the device instructs you to do so. **DO NOT TOUCH THE PATIENT.**

**6.** Continue the cardiopulmonary resuscitation immediately after you have given the shock. Follow the instructions given by the device.

You can stop the cardiopulmonary resuscitation when you are given a permission to do so, when the patient starts to breathe or when you are too tired to keep doing it.
